Tray Tiles

Our 'Tray Tiles' have been designed to be used in conjunction with our 'Robust Flooring System'. The Tray Tile will be used as an alternative to the 'Standard Concrete Infill Block' at upper floor levels. The 'Tray Tile' is to be laid between the beams to form a complete floor. We can supply the Tray Tiles in either a 440mm width or 215mm width to suit by 'wide' and 'narrow' centres spacings. The 'Tray Tile' is to be used only when designed by Litecast, therefore we will provide a full design and guarantee, as well as stipulating and supplying the correct quantity of 'Tray Tiles' required in order to complete your project. Our reference code for this product is shown below;
