

PIPE HANGERS

PHANG

- STOCK CODE - ANC-PHANG
- WEIGHT - 0.75KG
- USAGE - INSTALLED AT 900MM CENTRES

'Pipe Hangers' are an ideal product for instances when you have a lack of back fill on site, piled foundations are in use, or there are heave risks due to the subsoil on site. Our 'Pipe Hangers' are used to provide a support for pipes situated beneath the level of the floor. The product is designed to be installed by fixing the unit to the shoulders of the floor beam, thus allowing the 'Pipe Hanger' to fall beneath the floor beam. Pipes can then be laid through the circular opening and tightened into place. We recommend two 'Pipe Hangers' are installed at 900mm centres. The 'Pipe Hangers' are designed to suit domestic drainage pipes of up to 110mm and are adjustable for fall. We supply the product as individual units with quantities to be specified by customer at time of order.
